## An Introduction to Energy Efficient Heating

Energy efficient heating for factories, warehouses and other large open spaces need not be expensive, and need not cost the earth to operate. At Procool, we have the experience to provide you with the most effective and efficient heating systems available, with designs tailor made to suit your business.

Whether it's a brand new installation to provide heating for the first time, the replacement of an inefficient or ineffective system, or a fully integrated temperature control scheme incorporating heating, heat recovery, ventilation and cooling, Procool are ideally placed to offer exactly what you need.

There are a bewildering number of competing technologies available in today's market, but because we are not tied to any particular manufacturer, we are able to select the best possible technology for your application, based on years of experience.

Aftercare is important, to make the most of your investment, and at Procool we are able to offer comprehensive maintenance packages, as well as independent advice on matters such as energy efficient control schemes, heat recovery, and fuel type. In many cases, our designs will be eligible for Carbon Trust Energy Efficiency Loans, and we are experts in assisting and expediting the application process for these.
